

Enabling dynamic and Intelligent workflows in the future EuroHPC ecosystem

OBJECTIVES

Creating a **European workflow platform** to enable the design of complex applications that integrate HPC processes, data analytics and artificial intelligence

Developing **methodologies** to widen the access to HPC to selected user communities

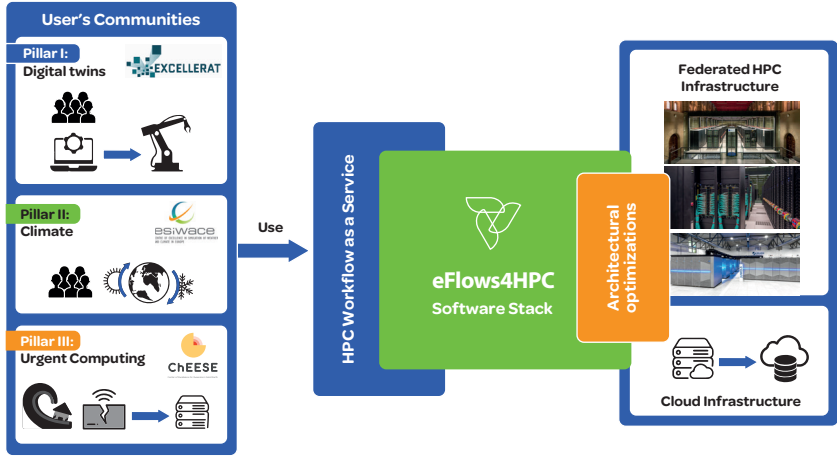

Demonstrating new workflow technologies through manufacturing, climate and urgent computing for natural hazards **use cases**

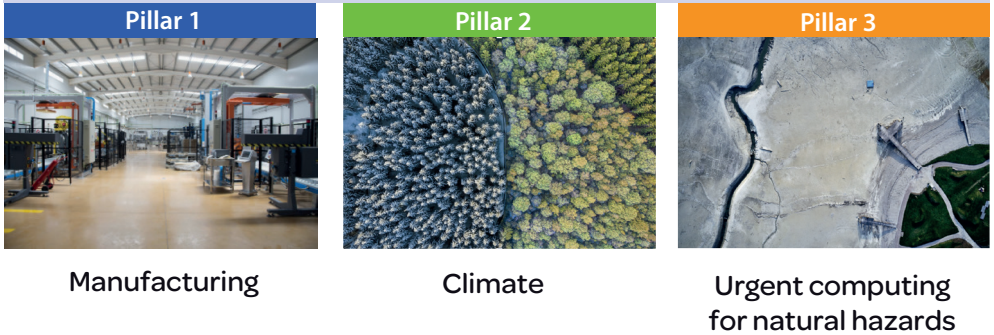

This project has received funding from the European High-Performance Computing Joint Undertaking (JU) under grant agreement No 955558. The JU receives support from the European Union's Horizon 2020 research and innovation programme and Spain, Germany, France, Italy, Poland, Switzerland, Norway.

The eFlows4HPC overview

Applying the novel workflow technologies in use cases of three application Pillars
