### Climateurope2: Climate services, standards, provenance and more 17 October 2023 Francisco Doblas-Reyes (ICREA and BSC)

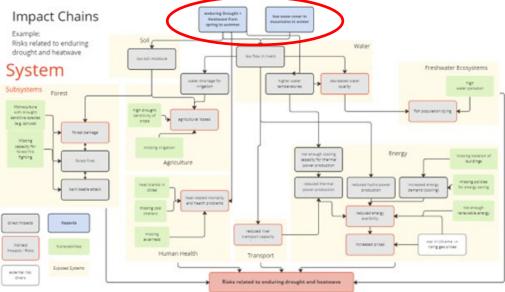

This project has received funding from the European Union's Horizon Europe research and innovation programme under Gement No 101056933. The sole responsibility for the content of this document lies with the Climateurope2 project and does not necessarilythafeptnion of the European Union.

## **Climate risk and adaptation**

Climate risk assessment and climate adaptation require access toreliable climate information. Climate services is the set of procedures that develops such information in context.

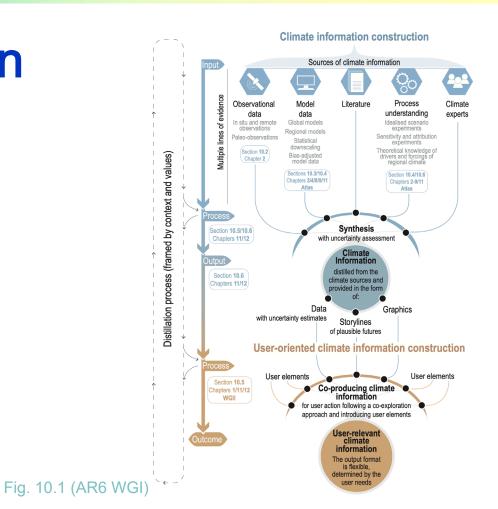

### EUCRA impact chain for heat and drought risk assessment

## Climate information and services

# What about quality?

### Paracetamol

#### Brand names include:

- Panadol<sup>®</sup>
- Paracare<sup>®</sup>
- Pacimol<sup>®</sup>

Sounds like 'paa-ra-SEE-ta-mol'

Health Navigator

Paracetamol is used to treat fever and pain including headache, and aches and pains associated with COVID-19. It begins to work about 30 minutes after a dose is taken, and the effects usually last for about 4 to 6 hours.

When taken as directed, paracetamol works well. However, it important not to take more than the daily recommended dose. If you take too much – all at once or over a period of days – paracetamol can damage your liver.

#### How to take paracetamol

Paracetamol tablets are commonly available as 500 mg tablets or caplets.

The usual dose for adults is 1 or 2 tablets every 4 to 6 hours as needed for pain or fever.

C Always wait at least 4 hours between doses.

**Do not take** more than 8 tablets in 24 hours OR 4 grams in 24 hours.

#### Many other medicines have paracetamol in them

Some pain, cold and flu medicines also have paracetamol in them, eg, Coldral<sup>®</sup>, Nuromol<sup>®</sup>, Lemsip<sup>®</sup>, and Maxigesic<sup>®</sup>.

Check the ingredients of medicines carefully before you take them.

If you do take other medicines that have paracetamol in them, do not to take more than the recommended maximum dose of paracetamol each day.

Ask your pharmacist if you are not sure.

Keep a record of how many doses you have taken.

#### Paracetamol overdose is a medical emergency

If you realise you have taken too much paracetamol (including from other products with paracetamol in them), immediately call your doctor, nurse or the Poisons Centre 0800 POISON (0800 764 766)

- DO NOT WAIT for signs of overdose as these appear when the damage to your liver is already done.
- Signs of overdose include nausea (feeling sick) or vomiting (being sick), diarrhoea (runny poo), yellow skin or eyes, poor appetite, confusion or extreme sleepiness.
- Older people are most at risk, so should take extra care.

For more information about paracetamol, visit hn.org.nz/paracetamol

## What about quality?

Can we be confident in the service provided?

Quality management is central to ensure a reliable service useful to users

Poor quality leads to

- waste of time and money
- poor decisions
- frustration
- reputation damage

with the purpose of

- demonstrating that the service is a trusted source
- characterising quality dimensions in a clear and traceable way
- guiding users with information to make their own decisions
- providing a vehicle that will trigger actions to improve the service

## Quality assurance of climate services

Quality assurance assesses the fitnessfor-purpose of climate services against standards from multiple angles: tools, workflows, data, applications, provenance, documentation, user engagement, etc.

For instance, software quality assessment should be based on the standard ISO/IEC 9126 and extensions (e.g., ISO/IEC 25010:2011).

Standardising Development of standardisation procedures for climate services

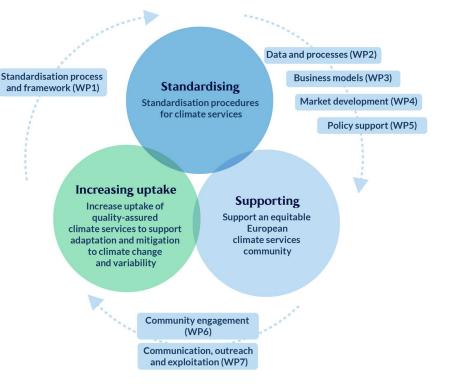

### Supporting

Support of an equitable European climate services community

### Increasing uptake

Enhancement of the uptake of quality assured climate services to support climate adaptation and mitigation

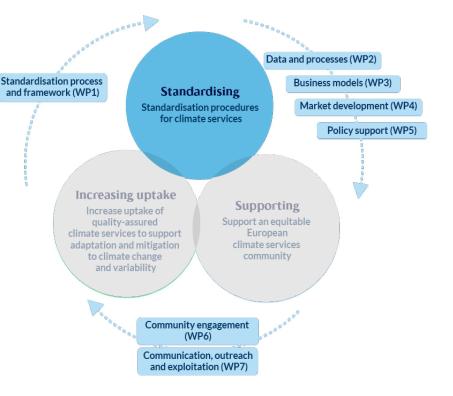

CSA Horizon Europe, Sep 2022Feb 2027

### Standardising

## Development of standardisation procedures for climate services

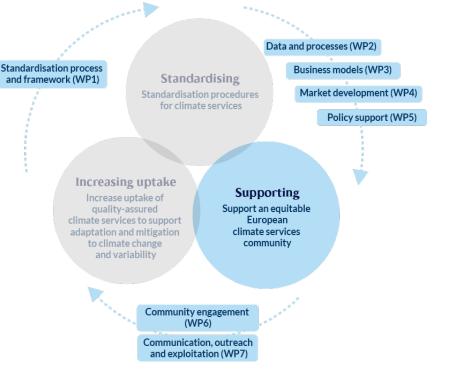

- O1.1 Estimate the maturity of the climate services components
- O1.2 Proceed with the standardisation of the components of climate services and the interoperability of the standards
- O1.3 Develop a quality management approach for the verification of climate services

### Supporting

# Support of an equitable European climate services community

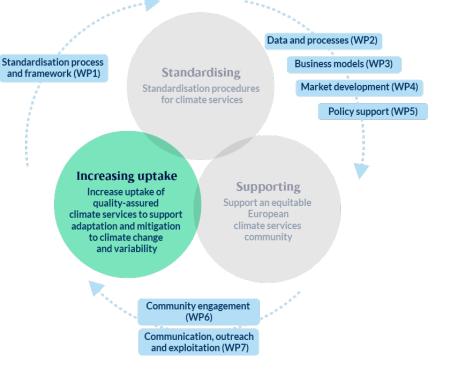

- O2.1 Sustain a community of European climate services actors, including underrepresented groups
- O2.2 Develop an interactive platform and support service
- O2.3 Integrate ethical, political, anthropological and sociological perspectives from social sciences and humanities

### Increasing uptake

Enhancement of the uptake of quality assured climate services to support climate adaptation and mitigation

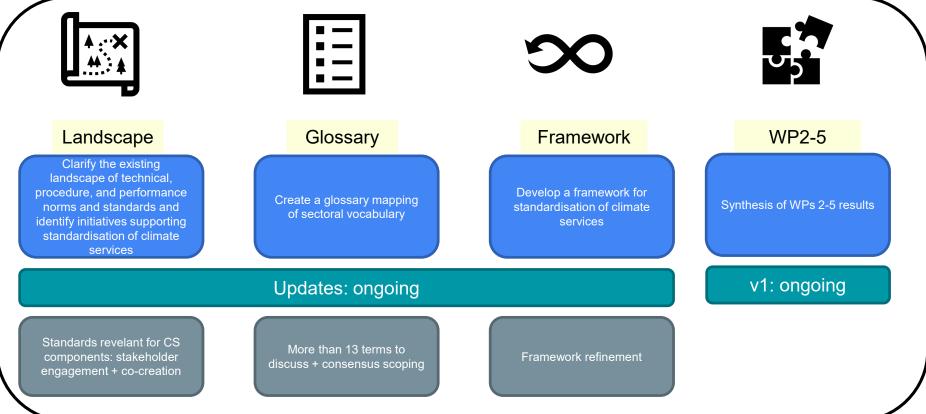

- O3.1 Develop a strategy for the accreditation of climate services
- O3.2 Provide recommendations for improving tools to enhance the salience, credibility and legitimacy of climate services
- O3.3 Promote trust between supply and demand
- O3.4 Assess current business models and the scalability of market solutions

### **Community and audience**

### **Elements for standard recommendations**

## Provenance in climate information

A cacophony of climate information sources is available, and this happens in a growing market with no clearly defined standards. What about the adequacy of the information sources? How is product quality addressed? As open as possible, as restricted as necessary

#### Popular repositories

### **IPCC WGI Interactive Atlas**

A novel tool for flexible spatial and temporal analyses of much of the observed and projected climate change information underpinning the Working Group I contribution to the Sixth Assessment Report, including regional synthesis for Climatic Impact-Drivers (CIDs).

### What is the ESMValTool?

The Earth System Model Evaluation Tool (ESMValTool) is an open-source community-developed diagnostics and performance metrics tool for the evaluation and analysis of Earth System Models (ESMs). ESMValTool allows for a comparison of single or multiple models against predecessor versions and observations. The aim of the ESMValTool is to take model evaluation to the next level by facilitating analysis of many different ESM components, providing welldocumented source code and scientific background of implemented diagnostics. Traceability and

### Diagnostic script interfaces

In order to communicate with diagnostic scripts, ESMValCore uses YAML files. The YAML files provided by ESMValCore to the diagnostic script tell the diagnostic script the settings that were provided in the recipe and where to find the pre-processed input data. On the other hand, the YAML file provided by the diagnostic script to ESMValCore tells ESMValCore which preprocessed data was used to create what plots. The latter is optional, but needed for recording provenance.

### Provenance

When ESMValCore (the esmval tool command) runs a recipe, it will first find all data and run the default preprocessor steps plus any additional preprocessing steps defined in the recipe. Next it will run the diagnostic script defined in the recipe and finally it will store provenance information. Provenance information is stored in the W3C PROV XML format. To read in and extract information, or to plot these files, the prov Python package can be used. In addition to provenance information, a caption is also added to the plots.

## What about provenance in this case?

A cacophony of climate information sources is available, and this happens in a growing market with no clearly defined standards. What about the adequacy of the information sources? How is product quality addressed? As open as possible, as restricted as necessary
